Profile

Full-stack software engineer with over 5 years of experience developing scalable applications using React, React Native, and Spring Boot.

Specialized in microfrontend and microservices architectures, with solid knowledge of software design, REST/GraphQL APIs, and deployment in Docker/Jenkins/OpenShift environments.

Education

Multimedial Design - UNLP (Completed, 2015)

Computer Science - UNLP (Incomplete, 2015).

Professional Experience

Software Engineer – GlobalLogic

Nov 2023 – Present

Development of a multi-platform virtual wallet (React Native, iOS, and Android) with a focus on performance, security, and efficient service consumption (Prisma, Coelsa, Mobiquity, SBS).

Implementation of a modular administrative backoffice using a Micro Frontend architecture using Webpack Module Federation and React.

Integration of CI/CD pipelines with Jenkins and quality control using SonarQube.

Frontend Developer – Minutentag

Jan 2022 – Sep 2023

Development of a SPA with React and Symfony, optimized for SEO and Server-Side Rendering.

Creation of a mobile app with React Native + Firebase (Auth, Firestore).

Contribution to Salesforce B2C e-commerce with a focus on performance, maintainability, and UX/UI improvements.

Mobile Developer – Third Platform Technologies

January 2021 – December 2021

Building a mobile MVP with React Native, working with external teams on code quality audits and scalable architecture design.

Collaborating on the full development cycle: design, implementation, testing, and release.
